PROFESSIONAL SUMMARY

Systems Engineer and junior full stack web developer with over a year of experience building applications with JavaScript, TypeScript, React, Next.js, Node.js and PostgreSQL, two of them in real use at small businesses. Systems and IT Support Intern at COMTIC. In my capstone project I integrated large language models (LLMs), augmented reality and Azure, and in personal projects I trained neural networks with NumPy and PyTorch. I am familiar with the Scrum agile methodology, which I used at university. I am looking for my first job as a junior full stack developer.

VALUE PROPOSITION

I have taken web applications from end to end: mobile interfaces, APIs, a database with row-level security, automated tests and deployment. I contribute to developing and testing front-end and back-end features with reusable code, and to user support.

EDUCATION

Systems Engineering (B.Sc.)
Universidad Católica Luis Amigó, Apartadó, Colombia
Technology Degree in Business Logistics
SENA, Colombia - 2021
High School Diploma
Institución Educativa Currulao, Colombia - 2021

ADDITIONAL TRAINING

Intermediate Machine Learning (course)
Kaggle - 2026
Power BI (8-hour course)
Open Academy - 2026

LANGUAGES

Spanish: Native | English: B2 Upper Intermediate (EF SET certification)

KEYWORDS

Full stack web development | Front-end | Back-end | JavaScript | TypeScript | HTML5 | CSS3 | React | Next.js | Angular | Node.js | NestJS | PostgreSQL | Prisma | REST API | Git and GitHub | Microsoft Azure | Technical support | Automated testing | PWA | Agile methodologies | Scrum | Artificial intelligence | Machine Learning | Neural networks | PyTorch | Computer vision

WORK EXPERIENCE

Systems and IT Support Intern
COMTIC | *Aug 2026 - Present*
Responsibilities

- I provide technical support to office users (computers, configurations and printers) to keep their work running.
- I maintain office equipment, diagnosing and repairing faults to restore operation.
- I manage the configuration of the osTicket help desk to organize the handling of requests.
- I configure routers with WinBox to support basic administration of the institutional network.
- I analyze the institutional intranet and test changes to support its modernization.

Achievements

- Improved the look of osTicket, translated its templates and notifications to Spanish and set up its alert email.
- Supported the environmental area with a web quiz about water, fixing the question display logic.
- Diagnosed and repaired an HP DesignJet T520 plotter (firmware and printhead).

FEATURED PROJECTS

Help desk: IT support ticketing system
Personal project | Nov 2026 | *mesa-ayuda-ti-sandy.vercel.app*

- Built with Angular 22, NestJS 12, Prisma and PostgreSQL a ticketing system with three roles, validated states, assignment, internal comments, history, an SLA metrics dashboard and user administration.
- Wrote 294 automated tests (108 integration tests against a real PostgreSQL), set up continuous integration with GitHub Actions and deployed it on Vercel with the database on Neon (demo with fictitious data).

Orígenes: immersive web platform with AI
Capstone project | *Jul 2025 - May 2026 | aruma-origenes.com*

- Built a 360° immersive environment with augmented reality (@google/model-viewer), React and Node.js/Express, with state synchronization for simultaneous shared tours.
- Integrated the Groq API (Llama 3.3) for "Aruma", a historian avatar with per-scene context, and neural voice with Azure Cognitive Services.

Polo Air Cool: system for an automotive A/C workshop
PWA in real use | *Sep 2026 - Present | polo-air-cool.vercel.app*

- Built a PWA with Next.js, TypeScript, Tailwind CSS and Supabase: work orders with photo log, inventory, petty cash, warranties, scheduling and a customer portal with WhatsApp notifications.
- Implemented roles (administrator and operator) and a login attempt limit.

Comanda: app for small restaurants
PWA in real use and public demo | *Oct 2026 - Present | comandacomi.vercel.app*

- Built a PWA with Next.js, TypeScript and Supabase: dine-in, takeout and delivery orders, cash and Nequi payments, customer credit and end-of-day closing, with offline operation.
- I maintain a live version in use (private repository) and a public demo with fictitious data.

Consultorio de Psicología: appointment management system
Web application | *May 2025 - May 2026 | consultorio-psicologia-demo.vercel.app*

- Built a platform with Node.js, Express and PostgreSQL to optimize scheduling and appointments, with a waiting list, advanced filters, clinical records exported to PDF and Google sign-in (OAuth 2.0).
- Implemented scheduling rules in PostgreSQL (triggers and exclusion constraints) that prevent overlapping appointments.

Neural network from scratch: handwritten digit recognition
Personal project | *Oct 2026 | red-neuronal-desde-cero.vercel.app*

- Programmed in NumPy, without PyTorch or TensorFlow, a neural network with backpropagation, the Adam optimizer and He initialization, and verified its gradients against finite differences.
- It reaches 98.1% accuracy on the 10,000 MNIST test images (97.8% for the same network in PyTorch) and runs in the browser; the demo reads multi-digit numbers (86.5% correct on 600 synthetic sequences).

Banana leaf disease classifier
Personal project | *Oct 2026 | clasificador-hojas-banano.vercel.app*

- Trained with transfer learning (MobileNetV2, PyTorch) a four-class classifier (healthy, Sigatoka, Cordana and Pestalotiopsis) on BananaLSD, grouping duplicate photos so they would not inflate the evaluation.
- Achieved 98.5% accuracy on 134 test photos (95% CI: 96.3 to 100%) and exported it to ONNX to run in the browser. Trained on photos from Bangladesh; not yet validated on leaves from Urabá.

Servitecas and Barberías: mobile applications
Demos with fictitious data | *Oct 2026 - Present | servitecas.vercel.app | barberias-demo-lyart.vercel.app*

- Built two PWAs with Next.js, TypeScript and Supabase: Servitecas (the customer approves work from a link; row-level security with tests) and Barberías (booking by link or QR, payment and end-of-day closing).

TECHNICAL SKILLS

- Front-end: JavaScript (ES6+), TypeScript, HTML5, CSS3, React, Next.js, Angular, Tailwind CSS, PWA
- Back-end and APIs: Node.js, NestJS, Express, REST API, Google authentication (OAuth 2.0)
- Databases: PostgreSQL, Prisma, Supabase (row-level security), MySQL
- Quality and versioning: Git and GitHub, testing with Vitest, ESLint, GitHub Actions, deployment on Vercel
- Cloud and AI: Microsoft Azure (basic level), Azure Cognitive Services, LLMs with the Groq API
- Machine Learning: Python (NumPy, PyTorch, Scikit-learn, Pandas), neural networks, Jupyter, Power BI (basic)
- IT support: user assistance, osTicket, equipment maintenance, basic networking (WinBox)
- Scrum and agile methodologies; office productivity tools

SOFT SKILLS

- Self-directed learning | Adaptability | Assertive communication | Problem solving | Attention to detail
